

SAFETY EQUIPMENT

When the application or federal and state laws require guarding against the hazards associated with air-moving equipment, you can rely on the design and manufacturing expertise of The New York Blower Company. **nyb** offers a full line of guards specifically designed to assist the user in providing a better environment for employees in compliance with OSHA requirements.

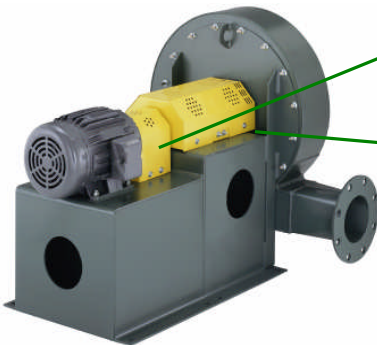

BELT GUARDS

The New York Blower Company manufactures belt guards for all of its V-belt drive fans. The guards consist of solid sheet-metal backs, fronts, and sides with ample ventilation. The tachometer opening in the front has a cap plug for maximum protection from rotating components. Belt guards are furnished in safety yellow as standard.

OUTLET GUARDS

Expanded metal screen in angle frame, reinforced as required, completely covers open fan discharge.

COUPLING GUARDS

The fan at left depicts the coupling-guard design for Arrangement 7 and 8 fans. The guard is constructed of solid sheet-metal and is provided with holes for ventilation. Coupling guards are coated safety yellow as standard.

SHAFT AND BEARING GUARDS

Shaft and bearing guards include bearing lubrication fittings extended through the guard for ease of maintenance. The guard is constructed of solid sheet-metal. Ventilation holes and safety yellow coating are standard.

INLET GUARDS

The axial fan at the left depicts the heavy-gauge wire inlet guards available for all fans with inlet cones and inlet bells...on open-inlet applications. GI [General Industrial] Fans with open inlets should be equipped with bell-mouth inlets which include an expanded metal guard.

ARRANGEMENT 10 WEATHER COVER/BELT GUARDS

All **nyb** Arrangement 10 fans are available with solid sheet-metal weather cover/belt guards. The cover completely encloses the motor/drive assembly. Louvered side panels provide for motor ventilation.
